

1) EditThisCookie

:- Allows you to edit, add, and delete cookies right in the browser. Useful for testing scenarios that involve cookies.

EditThisCookie is a cookie manager. You can add, delete, edit, search, protect and block cookies!

The first and best cookie manager for Google Chrome.

- ★ Edit cookies
- ★ Delete cookies
- ★ Add a new cookie
- ★ Create cookies
- ★ Search cookies
- ★ Protect cookies (read-only cookies)
- ★ Block cookies (cookie filter)
- ★ Export cookies in JSON, Netscape cookie file (perfect for wget and curl), Perl::LPW
- ★ Import cookies in JSON
- ★ Limit the maximum expiration date of any cookie
- ★ Improve the performance, remove old cookies

★ Import cookies.txt

URL :-

<https://chrome.google.com/webstore/detail/editthiscookie/fngmhnnpilhplaeedifhcceomclgfbg>

2) Postman Interceptor

:- Capture requests from any website and send them to Postman Client.

Postman Interceptor helps you send requests which use browser cookies through the Postman app.

It can also send headers which are normally restricted by Chrome but are critical for testing APIs. The Interceptor makes this process painless. Something that would have required a proxy earlier can now be achieved without any installation steps or extra configuration.

URL :-

<https://chrome.google.com/webstore/detail/postman-interceptor/aicmkgpgakddgnaphhhpliifpcfhhicfo/related>

3) JSON Viewer

:- Formats and highlights JSON data for easy readability. Useful when dealing with API responses.

The most beautiful and customizable JSON/JSONP highlighter that your eyes have ever seen. Open source at <https://goo.gl/fmphc7>

It is a Chrome extension for printing JSON and JSONP.

Notes:

- * This extension might crash with other JSON highlighters/formatters, you may need to disable them
- * To highlight local files and incognito tabs you have to manually enable these options on the extensions page
- * Sometimes when the plugin updates chrome leaves the old background process running and revokes some options, like the access to local files. When this happen just recheck the option that everything will work again
- * Works on local files (if you enable this in `chrome://extensions`)

Features

- * Syntax highlighting
- * 27 built-in themes
- * Collapsible nodes
- * Clickable URLs (optional)
- * URL does not matter (the content is analysed to determine if its a JSON or not)
- * Inspect your json typing "json" in the console
- * Hot word `json-viewer` into omnibox (type `json-viewer` + TAB and paste your JSON into omnibox, hit ENTER and it will be highlighted)
- * Toggle button to view the raw/highlighted version
- * Works with numbers bigger than `Number.MAX_VALUE`
- * Option to show line numbers
- * Option to customize your theme
- * Option to customize the tab size
- * Option to configure a max JSON size to highlight
- * Option to collapse nodes from second level + Button to unfold all collapsed nodes
- * Option to include a header with timestamp + url
- * Option to allow the edition of the loaded JSON
- * Option to sort json by keys
- * Option for C-style braces and arrays
- * Scratch pad, a new area which you can type/paste JSON and format indefinitely using a button or key shortcut. To access type `json-viewer` + `TAB` + `scratch pad` ENTER

This plugin is open source

- 4) User-Agent Switcher :-** Allows you to switch between user agents, which can be handy for testing how a website behaves on different Browser. Simplest way to switch between user-agents in your browser! User Agent Switcher is simple, but powerful extension. And much easier to use the Internet, regardless of which browser or operating system you prefer. It adds a toolbar button that you can use to toggle between different commonly used user agent strings.

So what's a User Agent?

A user agent is a small text description of your device that is sent with every web request. Websites can detect the browser you're using and serve different content - this is why iPhone and Android users see special mobile websites when they browse the web.

With this chrome extension, you can quickly and easily switch between user-agent strings. Also, you can set up specific URLs that you want to spoof every time.

Changing User-Agent allows you to mimic, spoof or fake other browsers, devices or search engine spiders.

Note:

Sometimes problems may occur after using a mobile user-agent, and won't switch back no matter what you spoof, you will need to switch the user-agent back to Chrome and clear your cookies for the sites to treat the browser normally again!

- 5) Wappalyzer :-** Identifies the technologies used on websites, including web frameworks, CMS, and server software. Identify web technologies Wappalyzer is a technology profiler that shows you what websites are built with. Find out what CMS a website is using, as well as any framework, ecommerce platform, JavaScript libraries and many more.

Wappalyzer is more than a CMS detector or framework detector: it uncovers more than a thousand technologies in dozens of categories such as programming languages, analytics, marketing tools, payment processors, CRM, CDN and others.

SelectorsHub

<https://chrome.google.com/webstore/detail/selectorshub/ndgimibanhlabgdgjcpcbndiehljcpfh>

- 7) Selenium IDE :-** Selenium Record and Playback tool for ease of getting acquainted with Selenium WebDriver.

URL :-

<https://chrome.google.com/webstore/detail/selenium-ide/mooikfkahbdckldjjndioackbalphokd>

- 8) Katalon Recorder :-** Selenium IDE alternative to record and export Selenium scripts. With reports & screenshots. Fast & open-source.

URL :-

<https://chrome.google.com/webstore/detail/katalon-recorder-selenium/ljdobmomdgdlniojadhophkpialdid>

- 9) Bug Magnet:** Adds common test data to text fields, making it easy to test form validations and input handling.

Exploratory testing assistant for Chrome. Adds common problematic values and edge cases to the context menu (right-click) for editable elements, so you can keep them handy and access them easily during exploratory testing sessions.

- Convenient access to common boundaries and edge cases for exploratory testing

- Extend easily with your own config files
- Works on input fields, text areas, content editable DIVs
- Works on multi-frame pages, but only if they are from the same domain
- Tiny overhead per page (<1k), no 3rd party library dependencies, completely passive, so it does not interfere with your web app execution in any way
- Opensource and customisable (<https://github.com/gojko/bugmagnet>)

URL :-

<https://chrome.google.com/webstore/detail/bug-magnet/efhedldbjahpgjcneebmbolkaibhckfi/related>

10) **Link Redirect Trace:** Helps you trace and troubleshoot redirects by showing you the complete path of redirects.

The all-in-one redirect path analyzer. It also analyzes HTTP Headers, REL-canonicals, robots.txt, link power, and link trust! Perform advanced, comprehensive, and correct analysis of redirects and REL-canonicals.

Get the complete picture on every redirect.

Use this extension for your SEO analysis, On page SEO, Off-page SEO, competitor analysis, and more.

See instantly

- if robots.txt blocks crawlers from a redirect (checked via robots.txt for or X-Robots-Tags in HTTP header);
- which URL drops cookies;
- the LRT Power and LRT Trust of each URL;
- supports NOINDEX/NOFOLLOW tags on every redirect step;

- check for other technical issues like Bot-specific blocking.

URL :-

<https://chrome.google.com/webstore/detail/link-redirect-trace/nnpljppamoaalgkieeciijbcccchlpoh/related>

11) **Ghostery:** A privacy and ad blocker extension that can be useful for testing how a website behaves with various tracking scripts disabled.

Ghostery is a powerful privacy extension. Block ads, stop trackers and speed up websites.

Ghostery has more than 100+ million downloads worldwide.

We provide safe, fast, and clutter-free browsing. Our extension gives you full adblock functionality, stops trackers from accessing your personal data, and annoying cookie consent pop-ups.

Our users enjoy online privacy protection that works out-of-the-box. No need for customization and maintenance!

We have three main components:

- * **Ad-Blocking** - blocks all ads on websites you visit with your Chrome browser, including Youtube and Facebook, helping you to focus only on the information important to you.
- * **Anti-Tracking** - stops trackers' ability to collect your personal data, replacing it with random values and anonymizing your identity for data brokers. If you see a need to unblock individual trackers, the option is available.
- * **Never-Consent** - automatically removes intrusive cookie pop-ups and sends an important message to website owners telling them that you don't want to be tracked. This feature adds convenience to each website you visit and acts like your privacy advocate towards content providers while using Chrome.

Our ad-blocking extension comes with additional features not found in any other ad blocker:

- * **Trackers information** on any website you visit, informing you about the number of trackers, their type, and the company operating them.
- * **Trackers Preview** on search engine result pages - displaying tracker information even before you visit a page. If you decide to visit the website, Ghostery will block any trackers waiting for you there.
- * **WhoTracks.Me** - Owning and operating the largest database of trackers allows Ghostery to update tracker information fast and reliably for all users.
- * **Managing your adblock**, anti-tracking, and cookie pop-up removal function in one click.

Our extension is open source, supported by thousands of contributors worldwide, and free to use - forever.

Ghostery's core features are free for everyone. Take your experience to the next level and become a contributor to access extension themes, priority support, and historical statistics. Contributors also help us fund the development of the Privacy Suite and WhoTracks.Me, the largest database of trackers in the world. Become a contributor and help us fight for privacy as a human right!

Window Resizer: Allows you to resize your browser window to specific dimensions, helping you test responsive design.

12) **Window Resizer:** Allows you to resize your browser window to specific dimensions, helping you test responsive design.

Resize the browser window to emulate various screen resolutions.

This extension re-sizes the browser's window in order to emulate various resolutions. It is particularly useful for web designers and developers by helping them test their layouts on different browser resolutions.

The resolutions list is completely customizable (add/delete/re-order).

You can set the window's width/height, window's position, preset icon (phone, tablet, laptop, desktop) and even the option to apply the new dimensions to the entire window or just to the viewport.

The extension also features customizable global key shortcuts, an option to export your settings and import them on another computer and more!

Please report all bugs (or suggestions) using the support link on the extension's details page.

URL :-

<https://chrome.google.com/webstore/detail/window-resizer/kkelicaakdanhinjdeammilcgefongh>

13) **Clear Cache:** Quickly clears your browser cache and cookies. Useful for testing scenarios that involve cached data.

Clear your cache and browsing data with a single click of a button.

Quickly clear your cache with this extension without any confirmation dialogs, pop-ups or other annoyances.

You can customize what and how much of your data you want to clear on the options page, including: App Cache, Cache, Cookies, Downloads, File Systems, Form Data, History, Indexed DB, Local Storage, Plugin Data, Passwords and WebSQL.

Cookies can either be removed globally, only for certain domains or for everything except for certain domains.

URL :-

<https://chrome.google.com/webstore/detail/clear-cache/cppjkneekbjaeellbfkmgnhonkkjfpdn>

14) **Page Ruler:** Allows you to draw out a ruler to get pixel dimensions and positioning on a webpage.

Measure page elements size in pixel with an easy-to-use ruler.

Page Ruler is an extension that lets you measure distances (in pixels) on a webpage.

It draws a rectangular ruler when you move your mouse on the page. The ruler has width, height, start and end all labeled with corresponding metrics in pixels. When you move your mouse, the rectangle changes its size and all the numerics are updated. To activate the addon please press the toolbar button once. Likewise, to disable the addon

please press the toolbar button again. This addon works with mouse clicks in desktop machines. For touch-enabled devices, you can work with touch to draw the rectangle within the page.

15) **Measure-it** :- same as above.

URL :-

<https://chrome.google.com/webstore/detail/measure-it/jocbgkoackihphodedlefohapackjmna/related>

16) **Measuremate** :- same as above.

URL :-

<https://chrome.google.com/webstore/detail/measuremate/fcbffocaoapnehgbchlchgndohggdei>

17) **Check My Links**: Checks all the links on a webpage to identify any broken links, helping with website testing.

Check My Links is a link checker that crawls through your webpage and looks for broken links.

'Check My Links' is an extension developed primarily for web designers, developers and content editors.

When you're editing a web page that has lots of links, wouldn't it be handy to be able to quickly check that all the links on the page are working ok? That's where 'Check My Links' comes in.

'Check My Links' quickly finds all the links on a web page, and checks each one for you. It highlights which ones are valid and which ones are broken, simple as that.

URL :-

<https://chrome.google.com/webstore/detail/check-my-links/ojkcdipcgfaekbeaelaapakgnjflfglf/related>

18) **CSSViewer**: A simple CSS property viewer that provides information about elements on a webpage.

URL :-

<https://chrome.google.com/webstore/detail/cssviewer/ggfgijbpiheegefliciemofobhmofgce/related>

19) **Lighthouse**: Lighthouse is an open-source, automated tool for improving the performance, quality, and correctness of your web apps.

Lighthouse is an open-source, automated tool for improving the performance, quality, and correctness of your web apps.

When auditing a page, Lighthouse runs a barrage of tests against the page, and then generates a report on how well the page did. From here you can use the failing tests as indicators on what you can do to improve your app.
